FIBER OPTIC ISOLATORS

Features:
- >10W Optical power handling capability
- Polarization Sensitive and Insensitive versions
- Product offerings over 532–2000 nm wavelength range
- High isolation levels and low return loss
- Low Insertion Loss and Polarization Dependent Losses
- Different compact sizes, including miniature packaged versions
- Stable and high reliability designs

Applications:
- High power laser to fiber coupling systems
- Optical amplifiers
- CATV systems
- OCT systems

Product Description:
OZ Optics offers a complete line of fiber pigtailed isolators for wavelengths ranging from 532nm to 2000nm. These isolators combine a free space Faraday rotator with polarizing optics to provide up to 60 dB of isolation and high power handling with minimum losses.

Our isolators are manufactured using OZ Optics's patented tilt alignment technique. Input light from an optical fiber is first collimated, then transmitted through the isolator optics. A focusing lens on the output side of the isolator then couples the light back into the output fiber. This method is highly flexible, and allows OZ Optics to offer isolators capable of handling up to 10 Watts of optical power through singlemode fibers.

Isolators are offered in two different versions, polarization sensitive and polarization insensitive. Both block any returning light regardless of the input polarization. However the insertion losses of polarization sensitive isolators depend on the input polarization, while for polarization insensitive isolators the insertion losses are constant.

Polarization sensitive isolators are simpler in construction. They are well suited for polarization maintaining fiber applications and for some applications where an input free space beam of constant polarization enters the Faraday optics. In either case linearly polarized light from the source or polarization maintaining fiber is aligned with the transmission axis of the isolator. However these isolators are not recommended for applications using standard singlemode fibers, as these fibers do not maintain polarization. Instead when polarized light is launched into singlemode fibers, any bends or stresses in the fiber will change the polarization state of the light traveling through the fiber. As a result, transmission through a polarization sensitive isolator will vary with any bending of the fiber or changes in temperature.

In contrast a polarization insensitive isolator first splits the light into separate polarizations and isolates each beam separately. The two beams are then recombining and transmitted through the output fiber. This method ensures low losses regardless of the input polarization state. For this reason we recommend using polarization insensitive isolators with standard singlemode fibers. Please note however that polarization insensitive isolators are not necessarily available for all wavelengths or power levels.

This data sheet is for products with less than 10 Watt power levels. For higher power levels, refer to our data sheet titled High Power Free Space and Fiber Pigtailed Isolators http://www.ozoptics.com/ALLNEW_PDF/DTS0123.pdf.

### Notes:

1. For other wavelengths, please contact OZ Optics.
2. This is the range of wavelengths over which the specified isolation is maintained.
3. At 23°C and specified bandwidth and over all polarization states.
4. Over specified operating temperature range, at specified bandwidth and over all polarization states.
5. Excluding connectors.
6. For the power handling levels, please contact OZ Optics.

Ordering Information for Custom Parts:

Questionnaire:
1. What is the wavelength of operation?
2. What is the optical power level seen by the device?
3. Do you require polarization sensitive OR polarization insensitive isolator?
4. What is the desired level of isolation and return losses?
5. What type of fibers do you want on the input and output ends?
6. What is the length of required pigtails (both on input side and output side)?
7. What kind of fiber protection jacket and connector type is required?
Ordering Information:
For standard parts please see our online catalog http://shop.ozoptics.com

**Description**

**Polarization Sensitive Isolator**

- **A1** = Isolator size:
  1 for Standard size
  2 for Miniature size (For up to 0.5 Watt power handling)
- **W** = Wavelength: Specify in nanometers
  (Example: 1550 for 1550 nm)
- **a/b** = Fiber core/cladding sizes, in microns
  9/125 for 1300/1550 nm SM fiber
  See Tables 1 to 5 of the Standard Tables
  for other standard fiber sizes
- **E** = Fiber type: S = Singlemode
  P = Polarization maintaining
- **LB** = Backreflection level: 40, 50, 55, or 60 dB
  version available for 1300 nm and 1550 nm wavelengths only.
- **XY** = Connector Code:
  3S = Super NTT-FC/PC
  3U = Ultra NTT-FC/PC
  3A = Angled NTT-FC/PC
  8 = AT&T-ST
  SC = SC
  SCA = Angled SC
  See Table 6 of the Standard Tables
  for other connectors

**Part Number**

- **HP** = High power handling option
  HP for 0.5 Watt power handling
  HP1 for 1 Watt power handling
  HP2 for 2 Watt power handling
  HP3 for 3 Watt power handling
  HP5 for 5 Watt power handling
  HP10 for 10 Watt power handling
  (Only available for selected wavelengths)
- **I** = Peak isolation: 25, 30, 40 or 55 dB

**Note:** Miniature housing size only available for 1064 nm, 1300 - 1625 nm wavelengths and for up to 0.5 W power handling.

---

**Description**

**Polarization Insensitive Isolator**

- **A1** = Isolator size:
  1 for Standard size
  2 for Miniature size (For up to 0.5 Watt power handling)
- **W** = Wavelength: Specify in nanometers
  (Example: 1550 for 1550 nm)
- **a/b** = Fiber core/cladding sizes, in microns
  9/125 for 1300/1550 nm SM fiber
  See Tables 1 to 5 of the Standard Tables
  for other standard fiber sizes
- **E** = Fiber type: S = Singlemode
  P = Polarization maintaining
- **LB** = Backreflection level: 40, 50, 55, or 60 dB
  version available for 1300 nm and 1550 nm wavelengths only.
- **XY** = Connector Code:
  3S = Super NTT-FC/PC
  3U = Ultra NTT-FC/PC
  3A = Angled NTT-FC/PC
  8 = AT&T-ST
  SC = SC
  SCA = Angled SC
  See Table 6 of the Standard Tables
  for other connectors

**Part Number**

- **HP** = High power handling option
  HP for 0.5 Watt power handling
  HP1 for 1 Watt power handling
  HP2 for 2 Watt power handling
  HP3 for 3 Watt power handling
  HP5 for 5 Watt power handling
  HP10 for 10 Watt power handling
  (Only available for selected wavelengths)
- **I** = Peak isolation: 25, 30, 40 or 55 dB

**Note:** Miniature housing size only available for 1064 nm, 1300 - 1625 nm wavelengths and for up to 0.5 W power handling.
### Polarization Insensitive:
